

# FACT SHEET

## PYRUS x tripolida chastity

**Origin:** South-eastern China, Korea, Japan and Taiwan

**Description:** *Pyrus x tripolida* 'Chastity' is a delightful new introduction from our USA breeding programs. The tree was selected for its small size and horizontally spreading growth habit. Like most *Pyrus* this is certainly a very good option for an urban/street tree situations, particularly beneath power lines due to its compact size.

**Tolerances:** Adapts to a range of soil types. Shallow rooting renders its tolerance to wind low. High pollution tolerance. Susceptible to Fire Blight.

**Notes:** Suitable for medium to large sites. Must be pruned early to achieve strong structure. Good tree that can be grown in low soil volume sites.
